

# User Manual

Task-list application to help users keep track of their tasks.

## Adding a task

To add a task, click on the “Add a task here!” button to create a task. A pop-up will appear requesting you to enter a new task name. Enter the desired task name and click submit.

## Deleting a task

To delete a task, click on the “Delete” button beside each individual task under task button header.

**Note:** deleting a task is irreversible.

## Editing a task

To edit a task, click on the “Edit” button beside each individual task under the task button header. A pop-up will appear requesting you to enter an updated name. Enter the desired updated task name and click submit.

## Completing a task

After adding a task, the status of the task will be shown on the right of the task box. To mark a task as complete, simply click the task and the status will be updated from “completed” to “not completed”.

## Adding a tag

To add a tag, click on the “+” button under the Tag Button header. A pop-up will appear requesting you to enter a new tag name. Enter the desired tag name and click submit. A new tag will be added above the status

## Deleting a tag

To delete a tag, click on the “-“ button under the Tag Button header. A pop-up will appear requesting you to enter a tag name to delete. Enter the desired tag name to be deleted and click submit.

**Note:** Tag names to be deleted must be spelt exactly including case sensitive alphabets.

## **Help buttons**

Help buttons are listed below the list of tasks for a quick refresher on how to use tasks and tags.

## **Accomplishment**

As someone with no experience in any web development at all, being able to create a CRUD web application and hosting it on the web is a huge accomplishment. In addition, due to issues with spam emails, I had less than 1 month to learn web development.

Throughout my journey, I faced many challenges from issues arising from installation, to understanding how each component mash with each other and deployment.

Despite that, I managed to slowly inch my way forward learning more about each tech stack along the way. Having no experience with html or css being able to come up with a website that looks decent (in my opinion) is a huge achievement.

Overall, I am quite happy with my journey thus far and this assignment has given me the opportunity to experience web development albeit with many obstacles along the way.
